

NISHANT ATRAM

Computer Science & Engineering Student | AI/ML | Software Development

India | nishantatram89@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Third-year B.Tech student in Computer Science and Engineering specializing in Artificial Intelligence and Machine Learning, with hands-on experience developing AI/ML and software projects. Interested in machine learning, generative AI, natural language processing, computer vision, backend development, databases, and full-stack application development. Experienced with Python, Java, SQL, Next.js, FastAPI, machine learning workflows, RAG-based applications, and database systems. Currently focused on strengthening software engineering, data structures and algorithms, and practical AI development skills.

EDUCATION

Bachelor of Technology — Computer Science & Engineering (AI & ML Specialization)

Vidyalankar Institute of Technology, Mumbai | 2024 – 2028 | Expected graduation: June–July 2028 | Currently 3rd Year, 5th Semester

Coursework: Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, Computer Networks, Database Management Systems, Data Warehousing & Mining, Software Engineering, Web Development, Theory of Computation

TECHNICAL SKILLS

Programming: Python, Java, C, SQL

AI/ML: Machine Learning, Artificial Intelligence, Natural Language Processing, Computer Vision, Generative AI, Retrieval-Augmented Generation (RAG), Data Science

Web Development: HTML, CSS, JavaScript, Next.js, FastAPI, REST APIs

Databases: MySQL, SQLite, ChromaDB

Libraries & Tools: Pandas, NumPy, Scikit-learn, OpenCV, Git, GitHub, Google Colab, Jupyter, Ollama, VS Code

Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Computer Networks, Software Engineering

PROJECTS

LexClarity — AI Legal Document Summarizer & Clause Extractor

Next.js | FastAPI | Python | SQLite | ChromaDB | Ollama | RAG | NLP

- Built an AI-powered application for analyzing legal documents and simplifying complex legal content.
- Implemented document summarization and important clause extraction workflows.
- Designed a Retrieval-Augmented Generation pipeline for question answering over uploaded documents.
- Integrated a vector database for document retrieval and semantic search.
- Used local LLM inference through Ollama to support privacy-oriented document processing.
- Built a full-stack architecture with a Next.js frontend and FastAPI backend.

FraudNet — Real-Time Transaction Fraud Detection

Python | Machine Learning | Pandas | NumPy | Scikit-learn | PaySim

- Developed a machine learning project for identifying potentially fraudulent financial transactions.
- Worked with the PaySim transaction dataset; applied data preprocessing and feature engineering.
- Explored classification-based approaches for suspicious transaction detection and risk analysis.

SignSpeak — Real-Time Sign Language Translator (concept)

Python | Computer Vision | Machine Learning | OpenCV

- Designed a real-time, camera-based workflow for recognizing sign language gestures.
- Explored image processing and machine learning approaches for sign classification and text output.

MedScribe AI — Clinical Conversation to Structured Medical Information (concept)

Python | NLP | Generative AI | LLMs

- Designed an AI application concept for converting clinical conversations into structured information.
- Explored NLP and LLM-based approaches for extracting relevant information from conversational text.

AgriDoc AI — Crop Disease Detection & Farmer Advisory (concept)

Python | Machine Learning | Computer Vision | NLP

- Designed an AI-powered agriculture application concept for crop disease identification and farmer assistance.
- Explored computer vision for image-based disease detection and an AI assistant for agricultural recommendations.

ACADEMIC & TECHNICAL EXPERIENCE

- Developed academic projects involving machine learning, databases, data warehousing, computer networks, software engineering, and web development.
- Worked with datasets and machine learning experiments using Python and Google Colab.
- Built database and data warehousing solutions using relational database concepts and SQL.
- Practiced object-oriented programming and problem solving using Java and other languages.
- Explored AI application development using LLMs, RAG architectures, vector databases, and local model inference.

CURRENT LEARNING

Data Structures & Algorithms, Advanced Python, Machine Learning, Deep Learning, Generative AI and LLM Applications, Retrieval-Augmented Generation, Backend and Full-Stack Development, Software Engineering, System Design Fundamentals, Git and GitHub, Problem Solving

ADDITIONAL INFORMATION

- Open to AI/ML, software development, and technology internship opportunities.
- Interested in building practical AI systems and real-world software applications.
